DETAILED ACTION

1. Claims 1-40 are presented for examination.
2. Claims 1-18 were cancelled in amendment filed 01/06/2009.

Allowable Subject Matter

1. Claims 19-40 are allowed.

The following is an examiner's statement of reasons for allowance:

As to claim claims 19, and 32, the prior arts of record taken alone or in combination with any other references fail to teach or suggest the claimed apparatus and method for measuring a thickness of a transparent sample, said device comprising: a first detector (11) that detects respective reflected light beams (L1', L1'') produced by partial reflection of the **first incident light beam** (L1) from said **front surface** (8) and from a **rear surface** (13) of the transparent sample (2), that determines corresponding positions of both of said reflected light beams (L1', L1''), and that determines a spacing between said reflected light beams (L1', L1'') produced by partial reflection of the first incident light beam (L1) from said front surface and from said rear surface; and

a second detector (12) that detects respective reflected light beams (L2', L2'') produced by partial reflection of the **second incident light beam** (L2) from said **front surface** (8) and from **said rear surface** (13) of the transparent sample (2), that determines corresponding positions of both of said reflected light beams (L2', L2'') and a spacing between said reflected light beams (L2', L2'') produced by partial reflection of the second incident light beam (L2) from said front surface

and from said rear surface; the closest reference of record Bredberg et al (U.S. Patent No. 5,442,573) does show 3 light beams with a first and second light beam being at difference incident angles from each other but only shows each beam creating impact points (Fig. 6, Items 53, 57, 67, and 63) which are measured at detectors (fig. 6, Items 58 and 68). If any of the 4 beams are defined to be one of the 3 incident beams only an impact point on the front surface of the transparent sample is measured and not a difference in distant on the detector between a beam reflected both off the front and back surface of the sample as claimed in both claims 19 and 32. Therefore the claimed invention is allowable over the references of record in combination with all the additional elements of claims 19 and 32.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
